Note also the position of the throttle and the link, the size of the blast orifice, the weight of the train, and the gradient. On diagrams from marine engines, note, in addition to the general facts, the speed of the ship in knots per hour, the direction and force of the wind, the direction and state of the sea, the diameter and pitch of the screw, the kind of coal, the amount consumed, and the ashes made per hour. CHAPTER V. HOW TO FIND THE POWER OF AN ENGINE. To find the power actually exerted within the cylinder of a steam engine, it is necessary to ascertain separately three factors and the prod uct of their continued multiplication. These factors are: The net area of the piston, designated by the letter a; the mean velocity or speed of the piston, designated by 5; and the mean effective pressure urging the piston forward, designated by M. E. P. The Piston Area. --This, at the back end, is the...
